

EuroCucina 2020: for Scandola Mobili, it's all about environmental sustainability and innovation.

At the Milan International Furniture Fair, being held from 7 to 10 June, Scandola Mobili will be revealing the secrets of its coatings. On the one hand, a responsible ethical choice, implemented with the help of reliable partners sharing our same company values, has delivered a range of Organic Coatings. On the other, we will be presenting our ultra-matt coatings developed to cater to market demands.

Care for the Environment and Nature are two of Scandola Mobili's cornerstones, dictated in part by the place that is home to our production facilities. The company sits 1,100 m above sea level in the town of Bosco Chiesanuova in the province of Verona, against the backdrop of Lessinia regional park. **Producing furniture in harmony with the surrounding environment has always been our number one goal.** Furthermore, with a finger on the market's pulse, the latest trends have inspired us to add brand-new super-matt and glare-free finishes. A real innovation in the wooden furniture field.

Organic coatings

Following a trial period, we **have introduced innovative, technologically advanced coatings into our production cycle:** we're talking about **Organic Coatings.**

But what are they exactly?

These are **water-based coatings formulated with ingredients derived from recycled materials.** The **renewable materials** utilized in production are **derived from innovative processes used to refine plant "waste", producing ingredients that don't compete with the food chain.** Hence a **good example of circular economy.**

By choosing this product, we are also **reducing CO2 emissions**. For every one thousand kg of this coating, we are actually cutting the amount of CO2 produced by 660 kg, the equivalent carbon dioxide emitted by a car driving 5,500 km.

The coatings have all the same properties as their fossil fuel based counterparts, featuring excellent hardness, high chemical resistance, physical strength, and UV resistance.

Ultra-matt coatings

To keep up with the market's latest trends, Scandola Mobili has **introduced a new range of ultra-matt coatings**. Surfaces are thus transformed into **textural, silky elements for unprecedented interiors**.

These coatings still meet **our high standards in terms of functionality and hardness**. The resulting **surfaces are fingerprint proof, scratchproof and stain resistant**, thus looking and feeling like new for years to come. **No glare and a lovely softness to the touch are two distinctive qualities of these coatings**.

They also have a **heat repair** property: **scratches on the surface can actually be repaired using heat, leaving the treated surface even and solid**.
